

ABSTRACT

A method of performing work on a communication system in accordance with a work assignment includes a step of identifying a data file associated with the work assignment, the data file including subscription information and network location information. The method also includes a step of preparing at least a first set of test parameters for performing a network test, the first set of parameters based on, at least in part, the subscription information and the network location information. The test parameters are then communicated to a test device. Thereafter, the test device performs a first test using the first set of test parameters.
